

How to Use HF-TR760 Finger

1. Main View

1. Main View (Main Interface)

The home page offers multiple function buttons. This document describes the following two functions:

- 442 Fingerprint Collection Demonstration (442)
- Fingerprint Matching Search (Fingerprint Search)

2. 442 Fingerprint Collection (Capture)

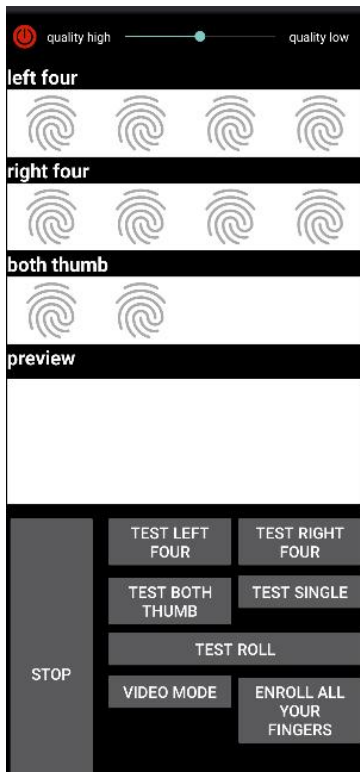

2.1 Device Connection

- Once you enter the 442 page, the device will automatically start up.
- Most Android systems will display a prompt box; please click OK.

- After the device is successfully turned on, all the buttons will be displayed and become available.

2.2 Capture Settings (parameter)

Users can adjust the NFIQ quality standards by dragging the bar.

The supported collection types include:

- Left four
- Right four
- Both thumbs
- Single finger
- Roll finger

2.3 Capture Operation (collection process)

Click the corresponding button to start the collection, for example:

- **TEST LEFT FOUR:** Collect the four fingers of the left hand
- **TEST RIGHT FOUR:** Collect the four fingers of the right hand
- **TEST BOTH THUMB:** Collect both thumbs
- **TEST SINGLE:** Collection

The leading biometric solution provider since 2005

- TEST ROLL: Rolling collection
- VIDEO MODE: Video mode, real-time preview of fingerprints

Operation procedure:

1. Click the button, and a prompt appears saying "Press your finger..." .
2. Place the corresponding finger on the fingerprint recognition area.
3. The APP will prompt "Success" indicating that the collection is complete.
4. After the collection is completed, the corresponding fingerprint image will be displayed.

2.4 Template Generation (Template creation)

After the collection is completed, the app will:

- Automatically generate an ISO fingerprint template using `FingerAlgAPI.createTemplateISO()`
- Save the template of each fingerprint in the memory

2.5 Enroll

After all the fingerprint collections are completed, click "enroll all your fingers":

1. Enter the name (User ID).
2. The app will store all the fingerprint templates locally.
3. A prompt will appear: "Enrollment succeeded"

3. Fingerprint Search

3.1 Overview

The FingerprintSearchActivity is used to collect fingerprints and perform matching within the local data.

3.2 Search Process

1. Once the equipment is turned on successfully, it automatically starts to conduct continuous collection.

The leading biometric solution provider since 2005

2. After each collection, an ISO template is generated.
3. Perform search and matching.
4. If a match is found: Display "MATCHED: your finger is <UserID>"
5. If no match is found: Display "NO MATCHED USER"
